NeonKey

Report **NK-EL-SAMPLE**
Checked **November 4, 2026**
Prepared for **Pat Owner, Your Business LLC**

EMAIL LOCKDOWN · EMAIL SECURITY REPORT

yourbusiness.com

A check of the public records that prove your email is really from you. No logins were used and nothing was changed.

SAMPLE REPORT for a made-up business. Your real report is built for your domain and goes further:

- Every step written out with the exact value
- Which services are allowed to send as you
- Help links for your exact domain host
- Day 2 and day 5 rechecks with an updated report
- Option to have us put the records in, included
- Your $49 credited toward any package

Needs attention

1 of 4 checks passing. 3 steps below bring yourbusiness.com to 4 of 4.

EMAIL PROVIDER	DOMAIN RECORDS AT	NEXT AUTOMATIC CHECK
Google Workspace	GoDaddy	In 2 days

YOUR DASHBOARD

MX — Passing

Mail server
Where your email is delivered.

```
Google Workspace (smtp.google.com)
```

SPF — Needs a change

Approved senders
The public list of services allowed to send email as you.

```
v=spf1 include:servers.mcsv.net ~all
Allows: Mailchimp
```

DKIM — Not verified

Digital signature
A signature that proves a message really came from you.

```
Couldn't verify a key at the names Google Wor
kspace normally uses. It may be off, or set u
p under a custom name.
```

DMARC — Missing

Spoofing policy
Tells inboxes what to do with mail that fakes your address.

```
No DMARC record
```

SAMPLE

TWO WAYS TO FINISH

A. Do it yourself
Follow the action plan below. Each step has the exact record to paste.

B. Have us put them in, included in your $49
Reply "do it" and we'll walk you through inviting us as a helper at GoDaddy. No passwords shared.

YOUR ACTION PLAN

Sign in at **GoDaddy**, open the DNS settings for yourbusiness.com, and make each change below. Their guide: **adding a record at GoDaddy**.

1 Edit your SPF record

Right now your record allows Mailchimp to send as you, but not Google Workspace, which handles your everyday email. That makes your normal replies look unverified to your customers' inboxes. This adds Google Workspace and keeps everything already listed. Edit the existing record; there must only ever be one.

Type	TXT
Name / Host	@
Current	~~`v=spf1 include:servers.mcsv.net ~all`~~
New value	`v=spf1 include:servers.mcsv.net include:_spf.google.com ~all`
TTL	Default (or 1 hour)

2 Add your DMARC record

Exact value, where to paste it and why: in your full report.

3 Turn on (or confirm) DKIM in Google Workspace

Exact value, where to paste it and why: in your full report.

WHAT HAPPENS NEXT

Automatic rechecks

- Day 2: we check again and email you an updated "after" report once all four pass
- Day 5: an updated report of anything still open, and the offer to finish it for you
- Questions any time: reply to our email

Your $49 counts toward any NeonKey package
You're on Google Workspace. The Remote Small-Office IT Setup adds 2-step sign-in, a password manager and backups: from $250 after your credit. The Front Office Package is $950 after your credit. Mention report NK-EL-SAMPLE when you reply.
